

ENVIRO-COATING MEDIUM TREATMENT

Duraflut™ System

The Complete Package!

Features:

- **Easily applied at the corrugator with no bonding problems**
- **Increased stacking performance with resistance to water**
- **Energy efficient**
- **Environmentally friendly**

More Information about the Duraflut™ System

Enviro-Coatings' Duraflut™ System now offers the converter the option to replace most wax applications. Using Duraflut™ treated medium combined with liners coated with Enviro's water-based functional coatings allows the converter to have a fully recyclable system!

- ✓ **Duraflut™ coated medium**
- ✓ **Envirocoated liners**

Duraflut™, a water-based coating applied to the medium directly on the corrugator or off-line, provides increased stacking strength and water resistance, while eliminating safety and energy issues associated with hot wax. Treated medium can readily be combined with liners to produce a repulpable, recyclable and sustainable box.
